Detailed description of the above SRS template:

1. Introduction

1.1 Purpose

The word “vote” means to choose from a list, to elect or to determine. The main goal of voting (in a scenario involving the citizens of a given country) is to come up with leaders of the people’s choice. And the process of voting in an election is called Pole.

The Online Polling System is a java application which has important features related to GUI and database properties that determine the software requirements for this project. This project is meant for small scale voting processes like college elections or feedback forms. In this project, we will provide an online tool to vote on various questions submitted by the administrator/organizer.

The purpose of this document is to make the practical and non-functional requirements of the Online Polling System easier to understand. It also works with the aim of making the function clear to end-users.

1.2 Document Conventions

When writing this document, it was inherited that all requirements have the same priority. First an overall view of the system is presented and then all features and functions are analyzed in detail.

1.3 Intended Audience and Reading Suggestions

This project is a prototype for the online polling system and it is restricted within the college premises. This has been implemented under the guidance of college professors. This project is useful for the students and professors for e-voting.

1.4 Product Scope

A software product is an independent program and not part of a larger program. The system will be made up of two parts. Prior to the voting day, the system will be used for general purposes such as viewing participant profiles and previous voting results. Voters will be able to access the system through Java IDE only.

The system can be used for general polling in any institutions or communities. E.g.: for college elections, feedback forms etc.

- Less effort and less labour intensive, as the primary cost and focus primary on creating, managing the votes.
- Increasing number of voters as individuals will find it easier and more convenient to vote.

2. Overall Description

2.1 Product Perspective

“College Online Polling/ Voting System” is a java application which uses the concept of Advance Java and GUI. This application provides an easy and simple way to both administrator and voters in the collect polling process. In this application, voters can give their votes to the options that are already provided. The administrator can add all the details of the candidates with the selected department. The administrator can view all the details of the candidates and if necessary, he can delete the details of the candidate. In this application, all the details of the voters can be view in a combine form which makes the work of the administrator easy in analyzing the votes.

2.2 Product Functions

The system can work in two ways, namely, Normal Interaction Mode and Voting Mode.

The program will be in voting mode, with the sole purpose of voting on voting day. Normal Collaborative Mode to accept registrations, conversations between voters, and campaigns and programs are available in this mode at all times without voting Days.

2.3 User Classes and Characteristics

2 major classes will be there

Admin class: Admin can get logged into the application by entering valid credentials. Admin can add candidates. Admin can view the details of the votes and result. Class name is AminFrame.

Voter class: Voters can need to get registered with the application by entering all the details in the registration form. The voter can get logged in to the application by entering unique username and password. The voter can fill all the details to give his/her vote.

For the Registration process, there are classes named RegisterService and RegistrationFrame while for the Voting process, the classes are VoteService, VoteFrame, and VoteException.

DAO class includes all the function by which connectivity with the database is being processed. The Result is being calculated in the Result class. MyProject is the main class of this project which contains the psvm for the users to sign in and cast their votes.

All the classes including 'Frame' in their name, such as WelcomeFrame and ExitFrame, are being used for the GUI function to display the data.

2.4 Operating Environment

The poll server runs on JVM and IDE itself. It uses a friendship database to keep track of polling stations, which connects via a standard database connection way of meeting. To use the setup software, the environment needs to have Java Virtual machine you work on.

- Operating system: windows XP and above.
- Coding language: Advance Java
- Tool: IntelliJ IDE
- Database: MySQL

GUI (graphical user interface) will be used for this mini project.

2.5 Design and Implementation Constraints

Due to the sensitive nature of the information handled by the “Online Polling System” software, a good deal of specific design constraints will be taken into consideration:

- The system shall only have the ability to write vote data (not read).
- The system shall not have the ability to overwrite any previously written vote data.
- Ballot information cannot be changed once a vote has been cast.

2.6 User Documentation

Documentation for the “Online Voting System” software package will be provided in the form of an online help manual, accessible directly from any portion of the user interface. Two distinct variations will exist:

- The voter manual will cover, in detail, the process by which a voter chooses candidates, confirms their selections, makes corrections if necessary, and casts a ballot. This manual will be accessible to all users of the system.
- The system support manual will describe the steps necessary for a system administrator to add, remove or change a ballot entry - along with all other administrative functions. This manual will only be accessible to system administrators when properly logged in.

2.7 Assumptions and Dependencies

- It is assumed that the user knows his/her password
- It is assumed that the list of options/choices is been already provided to the users.

3. Functional Requirements / System Features

3.1 Main Feature

Voting and choosing their favorable option.

3.2 Question Answer Feature

3.1.1 Description and Priority

Priority – Less

We can use a feedback or question answer feature which will help the voter have good interactive with the Candidates.

3.1.2 Stimulus/Response Sequences

The Voter could ask any questions to the candidates and if the candidate gives an appropriate answer the voter would be more satisfied and the candidate too.

4. Other Nonfunctional Requirements

4.1 Performance Requirements

The program is expected to have a sensible short-term response. The voter must know the login details and should be able to get a response to his requests in 2-3 seconds.

System performance varies depending on its mode

- The “Electronic Polling System” software package will perform all functions with minimal delay from the time of the initial request.
- The software will only accommodate one user at a time. No simultaneous use of the system by multiple voters, administrators, or a combination thereof shall be allowed.

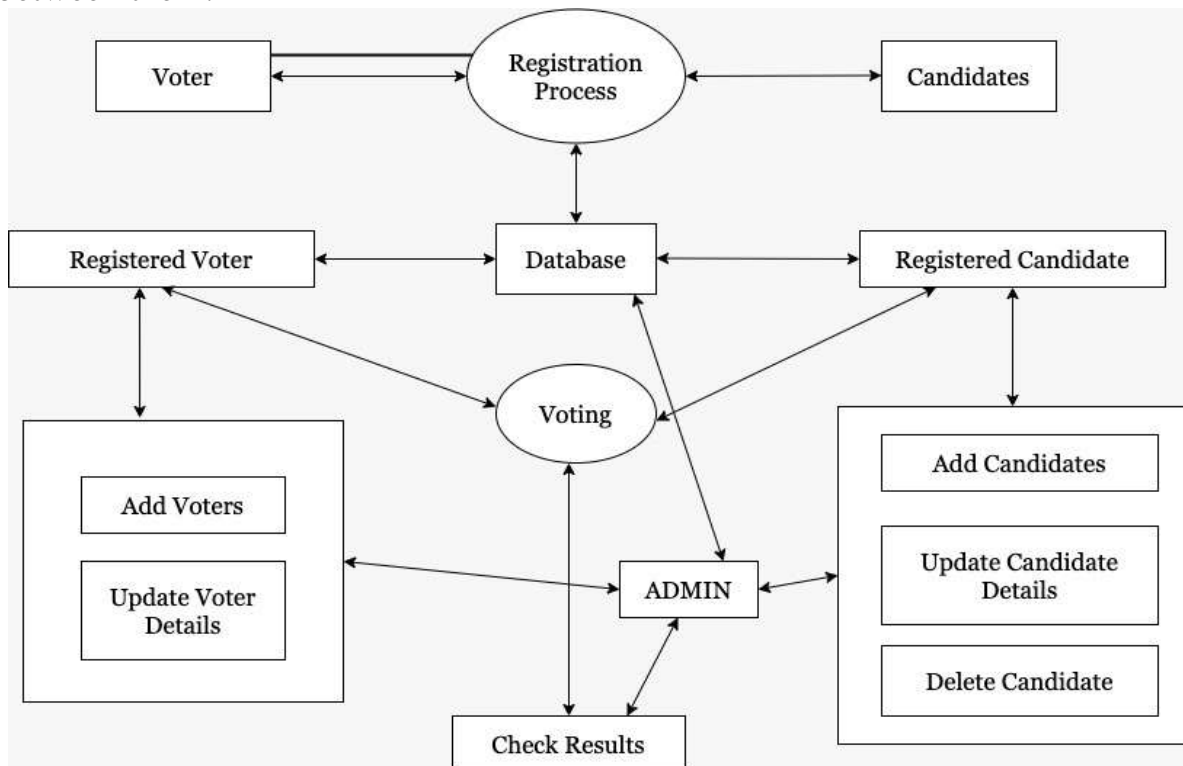

The steps involved to perform the implementation of voting database are as listed below.

A) E-R DIAGRAM

The E-R Diagram constitutes a technique for representing the logical structure of a database in a pictorial manner. This analysis is then used to organize data as a relation, normalizing relation and finally obtaining a relation database.

- **ENTITIES**: Which specify distinct real-world items in an application.

- **PROPERTIES/ATTRIBUTES**: Which specify properties of an entity and relationships.
- **RELATIONSHIPS**: Which connect entities and represent meaningful dependencies between them.

B) NORMALIZATION:

The basic objective of normalization is to reduce redundancy which means that information is to be stored only once. Storing information several times leads to wastage of storage space and increase in the total size of the data stored.

If a database is not properly designed it can give rise to modification anomalies.

Normalization is the process of breaking down a table into smaller tables. So that each table deals with a single theme.

4.2 Safety Requirements

- To prevent data loss in the event of a system failure, the results of the votes are cast until then you should be saved in the database.
- If the Admin finds any security issues in the system, it should be able to shut down shut down the system and block all server communication immediately to save votes have already been cast.
- The system must warn Admin users of system malfunctions.

4.3 Security Requirements

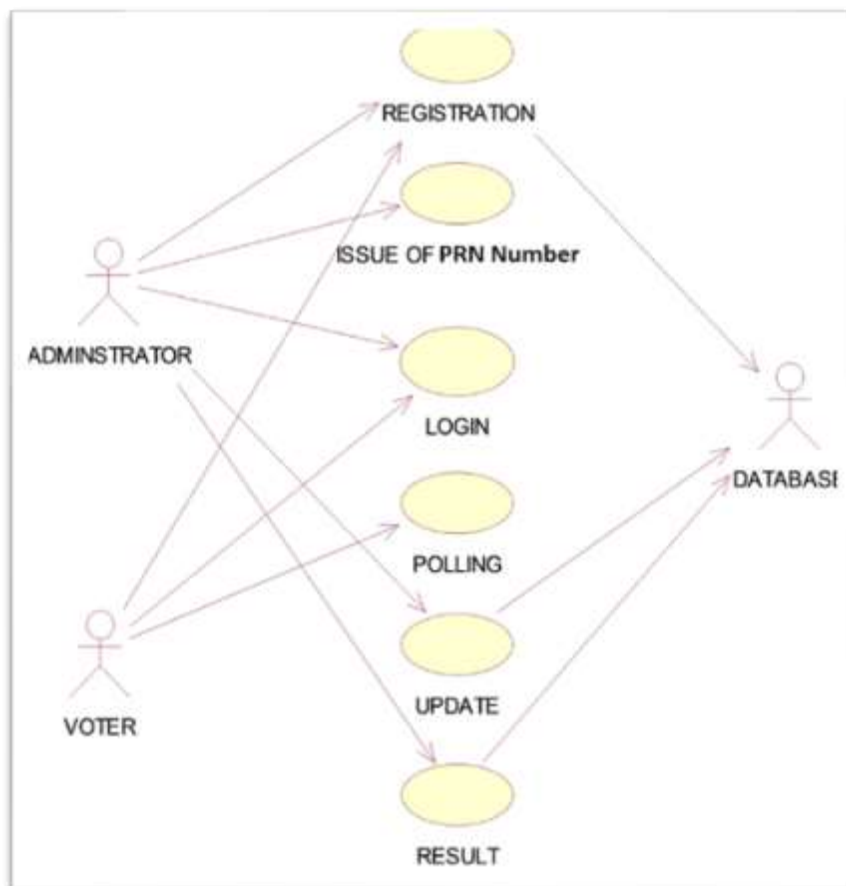

- To prevent attack the system should generate random words and ask the user to insert well to try more.
- All passwords generated or received must be stored in a database at encrypted form
- Client data transactions between the client and the server must be encrypted using SSL technology.

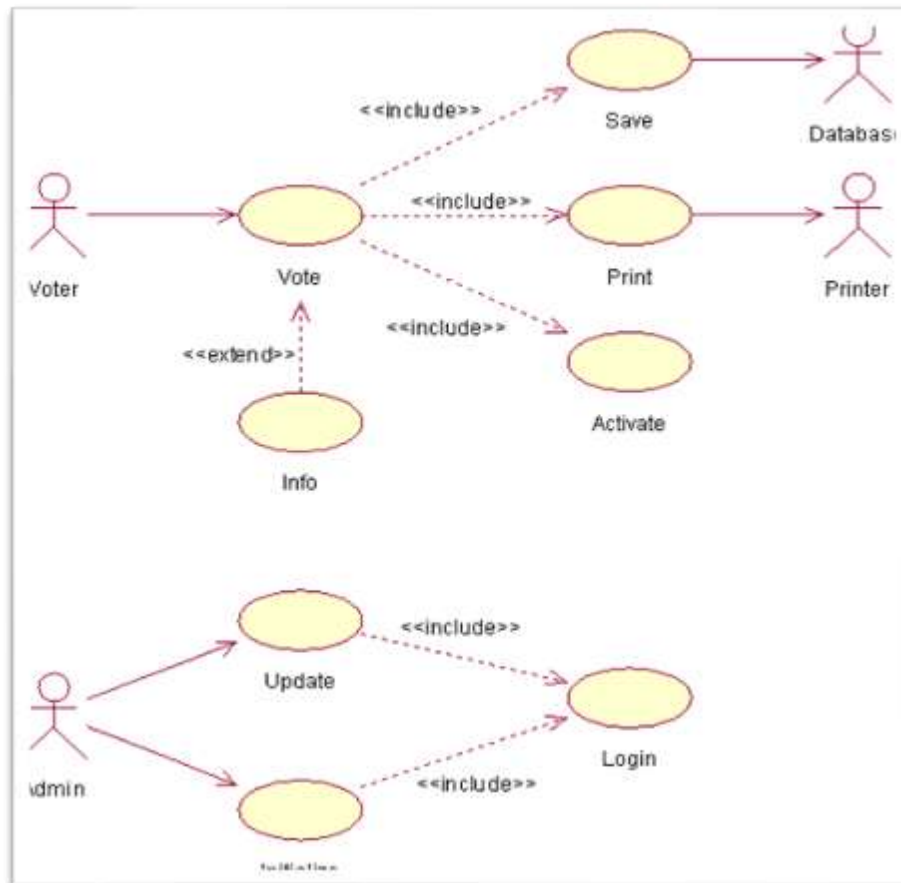

4.4 Software Quality Attributes

- AVAILABILITY: Favorable candidate or correct answer must be there in the options.
- FLEXIBILITY: The software will be flexible to users.
- CORRECTNESS: The software must count the votes correctly and it should provide a correct percentage distributor.
- MAINTAINABILITY: The admin must maintain the system according to the dates.
- USABILITY: The software should be used by maximum no. of candidates for voting.
 1. A voter may only cast a ballot if they are eligible to vote.
 2. A voter may only cast one (1) ballot per election.
- PORTABILITY: Since its, an online voting system, it is portable i.e. voters can cast their vote from any place.
- SUPPORTABILITY: The “Electronic Voting System” software shall have a clear and easily maintainable interface for managing election specific updates

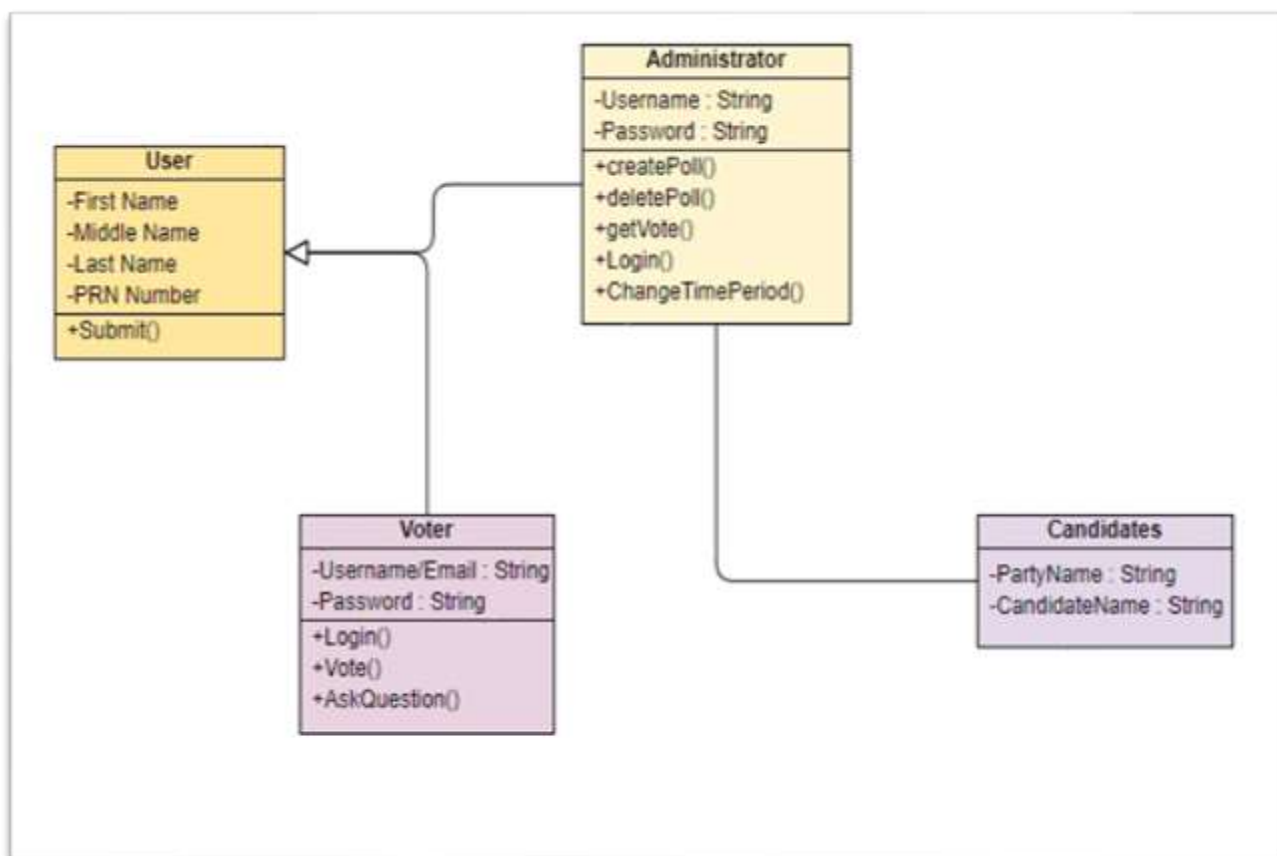

5. Analysis Models

5.1 Use-Case Diagram

5.2 Class Diagram

6. Implementation Screenshots/ Result

APPLICATION OUTPUTS:

Welcome page/
sign in page:

A screenshot of a web application window titled "Welcome page/sign in page". The window has a light gray background and a standard Windows-style title bar with a minimize button, a maximize button, and a close button. The main content area contains a sign-in form with the following elements:

- A label "Username" followed by a text input field.
- A label "Password" followed by a text input field.
- A "Submit" button located below the password field.
- A link "New Registration" located below the submit button.
- A "Sign Up" button located below the "New Registration" link.

Registration Page:

A screenshot of a web application window titled "Registration Page". The window has a light gray background and a standard Windows-style title bar with a minimize button, a maximize button, and a close button. The main content area contains a registration form with the following elements:

- A label "First Name" followed by a text input field.
- A label "Last Name" followed by a text input field.
- A label "Gender" followed by three radio buttons: "Male" (selected), "Female", and "other".
- A label "Phone No." followed by a text input field.
- A label "PRN" followed by a text input field.
- A label "Username" followed by a text input field.
- A label "Password" followed by a text input field.
- A label "Confirm password" followed by a text input field.
- A "Submit" button located at the bottom right of the form.

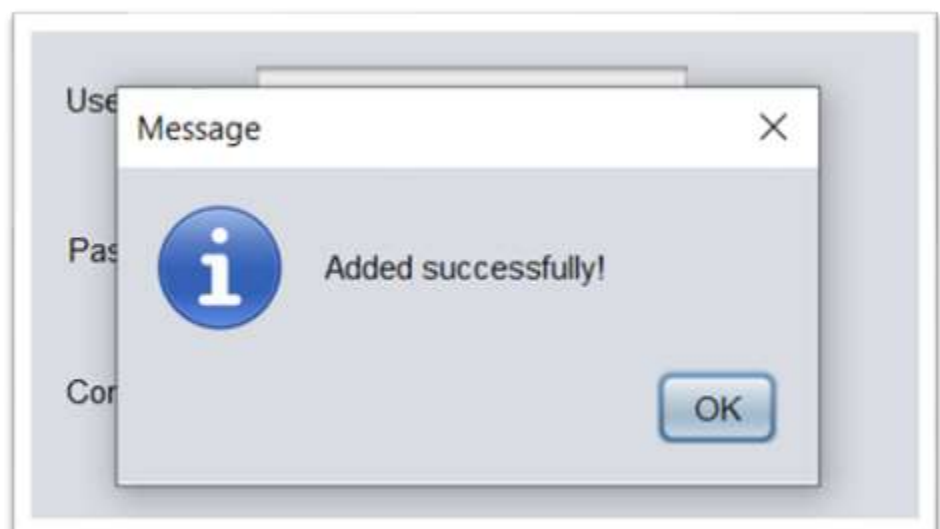

Registering new user successfully!

A registration form window with a title bar containing a small icon and standard window controls (minimize, maximize, close). The form fields are as follows:

Field	Value
First Name	Vidhi
Last Name	Khatwani
Gender	<input type="radio"/> Male <input checked="" type="radio"/> Female <input type="radio"/> other
Phone No.	8080809797
PRN	19070122194
Username	19070122194
Password	*****
Confirm password	vidhi

Submit

A screenshot of a login window. It features a title bar with a small icon on the left and standard minimize, maximize, and close buttons on the right. The main area has a light gray background. It contains two input fields: 'Username' with the value '19070122194' and 'Password' with masked characters '*****'. Below these is a 'Submit' button. At the bottom left, there is a 'New Registration' label and a 'Sign Up' button.

Username 19070122194

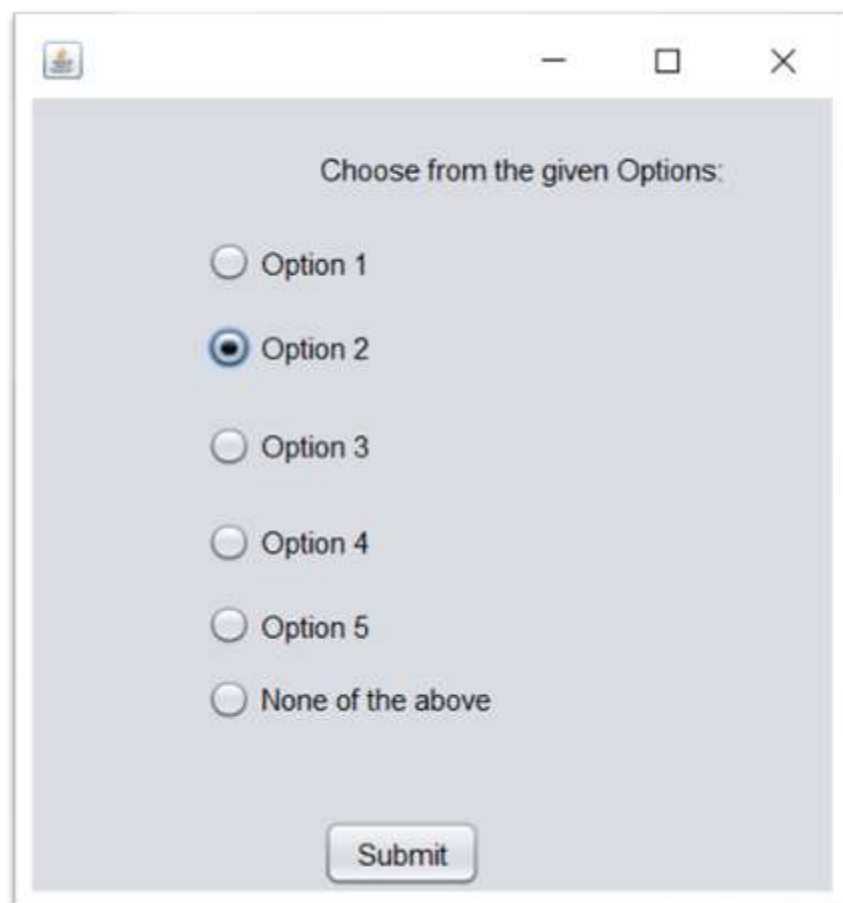

Password *****

Submit

New Registration

Sign Up

Login in to Vote!

A screenshot of a voting window. It has a title bar with a small icon on the left and standard minimize, maximize, and close buttons on the right. The main area has a light gray background. It displays the text 'Choose from the given Options:' followed by a list of six radio button options: 'Option 1', 'Option 2' (which is selected), 'Option 3', 'Option 4', 'Option 5', and 'None of the above'. A 'Submit' button is located at the bottom center.

Choose from the given Options:

☐ Option 1

☒ Option 2

☐ Option 3

☐ Option 4

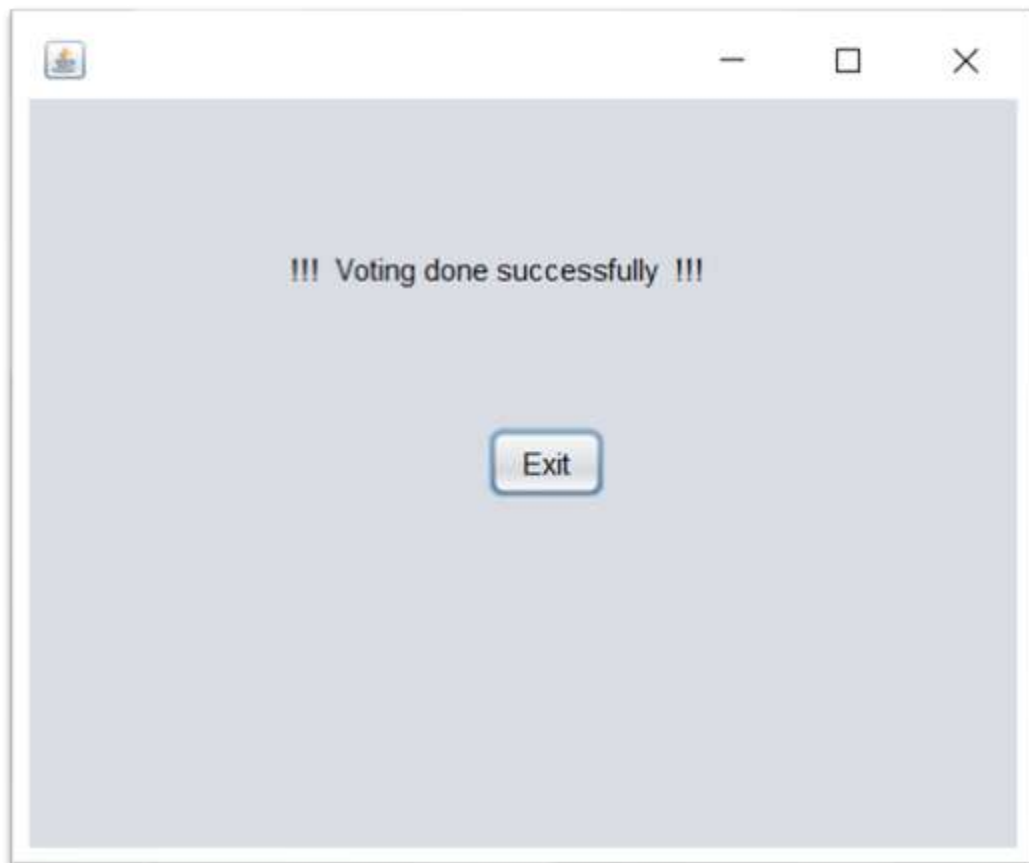

☐ Option 5

☐ None of the above

Submit

Voting Process!

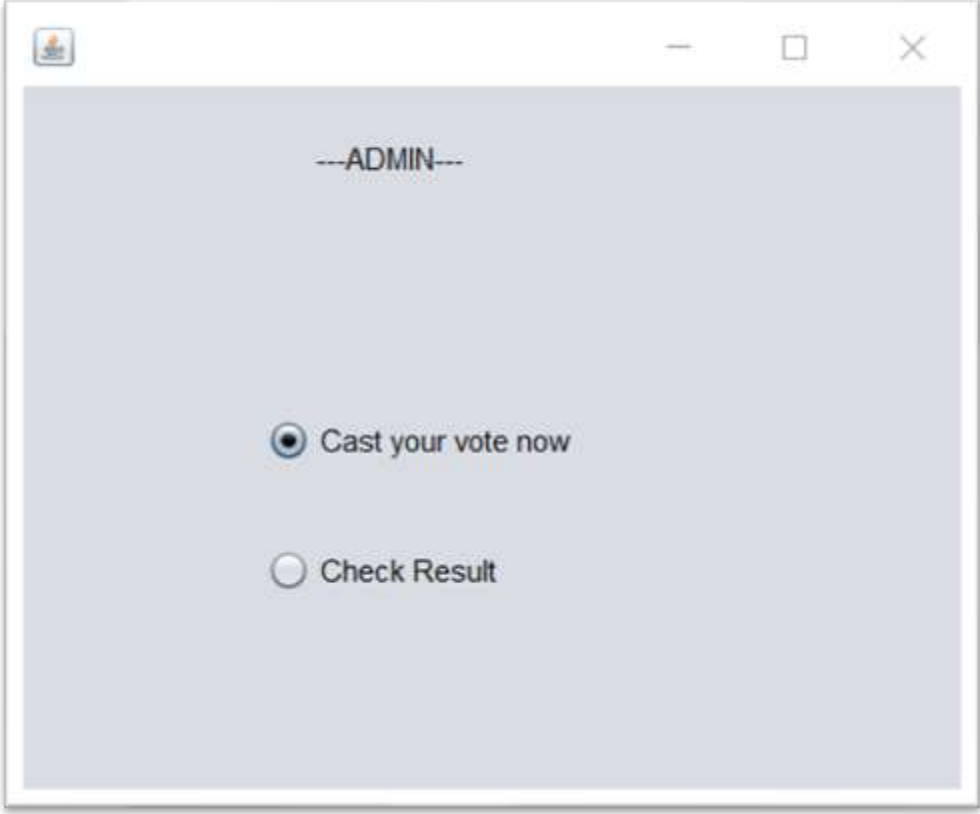

Voting Successful:

Admin Login:

Admin “Voting”:

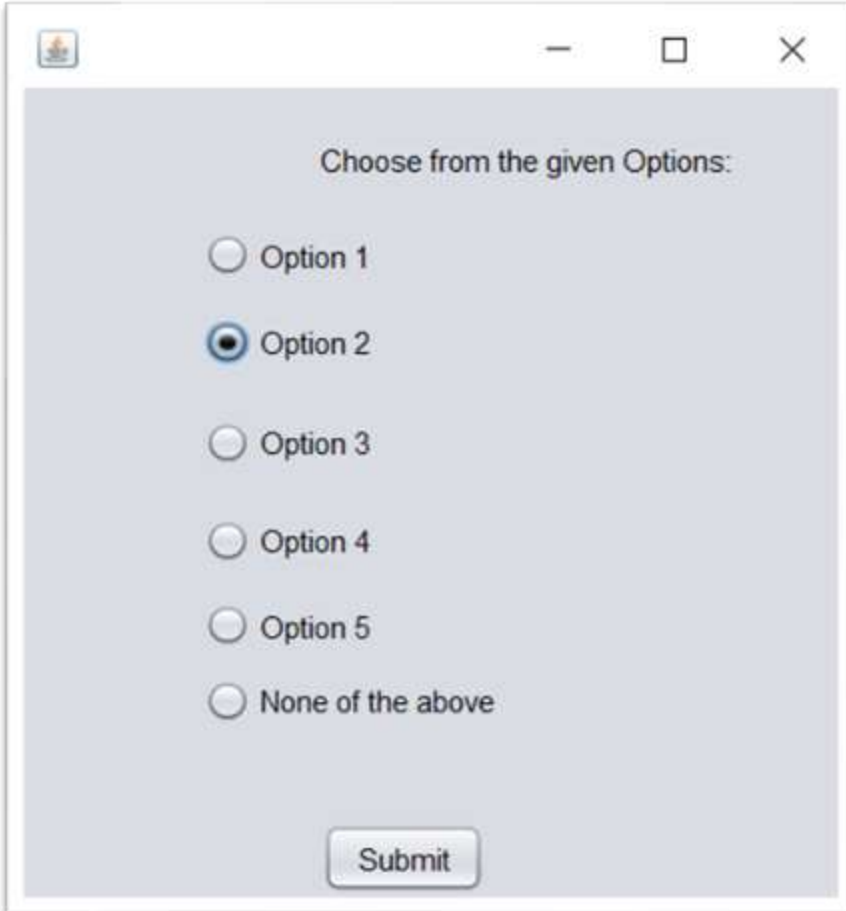

A screenshot of a web application window titled "Admin Voting". The window has a standard title bar with a minimize button, a maximize button, and a close button. The main content area is light gray and contains the text "--ADMIN--" at the top. Below this, there are two radio button options: "Cast your vote now" (which is selected) and "Check Result".

--ADMIN--

☒ Cast your vote now

☐ Check Result

Voting Process for admin:

A screenshot of a web application window titled "Voting Process for admin". The window has a standard title bar with a minimize button, a maximize button, and a close button. The main content area is light gray and contains the text "Choose from the given Options:" at the top. Below this, there are six radio button options: "Option 1", "Option 2" (which is selected), "Option 3", "Option 4", "Option 5", and "None of the above". At the bottom right of the content area, there is a "Submit" button.

Choose from the given Options:

☐ Option 1

☒ Option 2

☐ Option 3

☐ Option 4

☐ Option 5

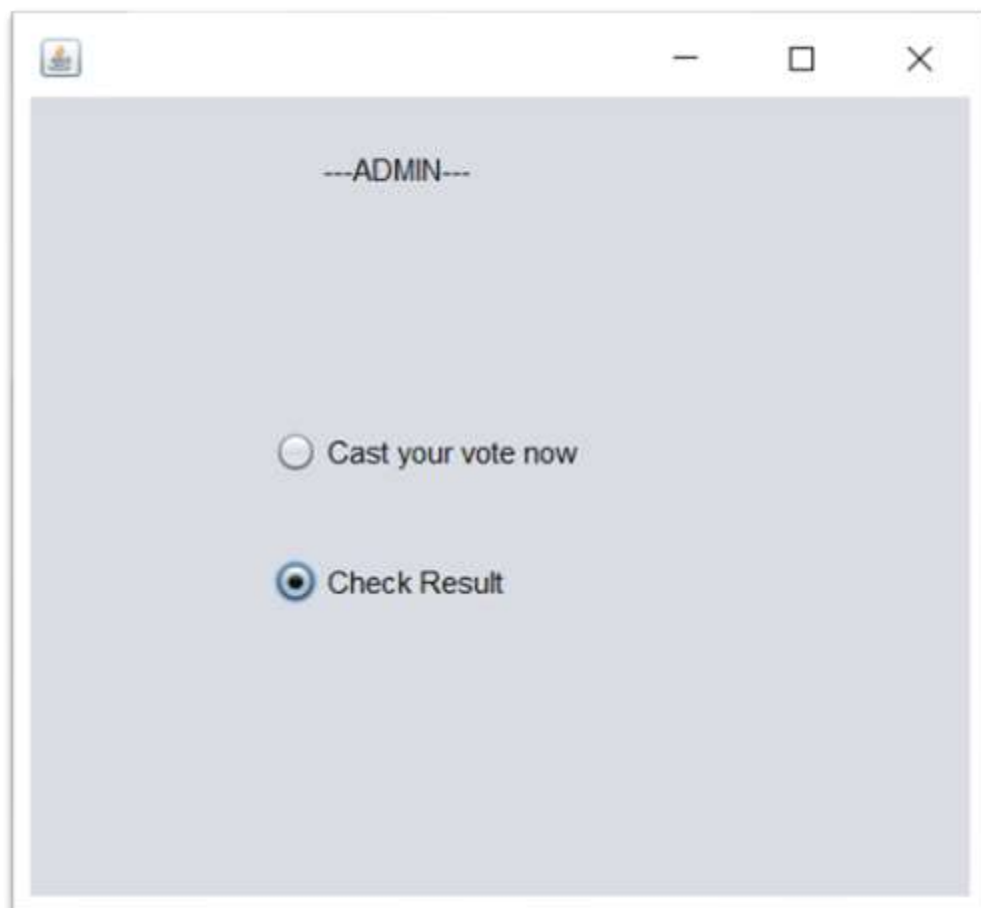

☐ None of the above

Submit

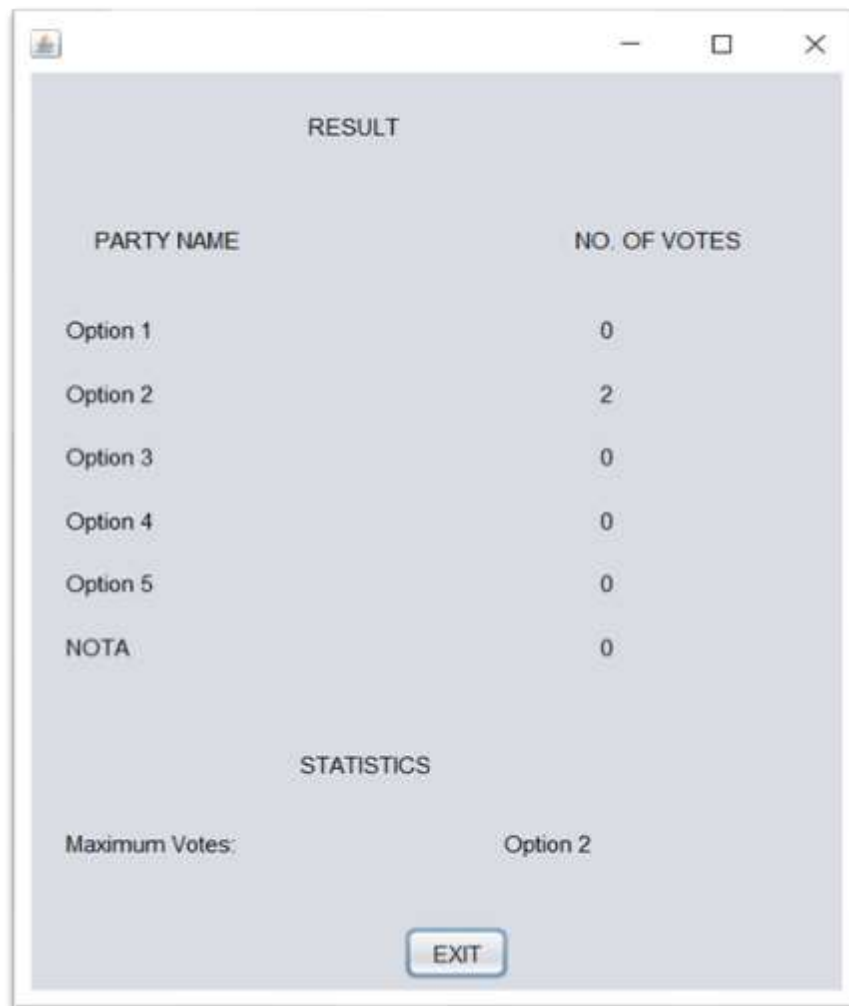

Voting Successful for Admin:

Admin “Check Result”:

Result page: (after 2 votes)

A screenshot of a software window titled "RESULT". The window has a light gray background and standard Windows window controls (minimize, maximize, close) in the top right corner. The main content area displays a table with two columns: "PARTY NAME" and "NO. OF VOTES". The table lists five options and a "NOTA" option, with Option 2 having 2 votes and all others having 0. Below the table, the text "STATISTICS" is centered, followed by "Maximum Votes:" and "Option 2". At the bottom center, there is a button labeled "EXIT".

PARTY NAME	NO. OF VOTES
Option 1	0
Option 2	2
Option 3	0
Option 4	0
Option 5	0
NOTA	0

STATISTICS

Maximum Votes: Option 2

EXIT

Logging in with incorrect password:

A screenshot of a software window showing a login form. The form has two input fields: "Username" with the text "vidhikhatwani" and "Password" with masked characters "*****". Below the password field is a "Submit" button. At the bottom left, there is a "New Registration" section with a "Sign Up" button. An error message dialog box is overlaid on the bottom right of the login window. The dialog box is titled "Message" and contains an information icon (a blue circle with a white 'i') and the text "Invalid username or password". An "OK" button is at the bottom right of the dialog box.

Username: vidhikhatwani

Password: *****

Result page (before any votes):

A screenshot of a software window titled "RESULT". The window has a standard Windows-style title bar with minimize, maximize, and close buttons. The main content area has a light blue background. At the top, the word "RESULT" is centered. Below it, there is a table with two columns: "PARTY NAME" and "NO. OF VOTES". The table lists six options: Option 1, Option 2, Option 3, Option 4, Option 5, and NOTA. Each option has a corresponding vote count of 0. Below the table, the word "STATISTICS" is centered. Under "STATISTICS", the text "Maximum Votes:" is displayed. At the bottom center of the window is a button labeled "EXIT".

PARTY NAME	NO. OF VOTES
Option 1	0
Option 2	0
Option 3	0
Option 4	0
Option 5	0
NOTA	0

Unmatched passwords in Registration form:

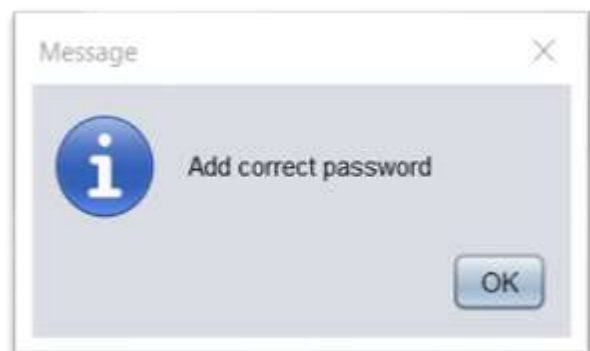

A screenshot of a registration form. It has a light blue background. There are two input fields: "Password" and "Confirm password". The "Password" field contains six asterisks (*****). The "Confirm password" field contains the text "abcdef". Below these fields is a button labeled "Submit".

Password *****

Confirm password abcdef

Submit

A screenshot of a message dialog box. It has a light blue background and a title bar with the word "Message" and a close button. The main content area contains a blue circular icon with a white lowercase 'i' (information icon). To the right of the icon is the text "Add correct password". At the bottom right is a button labeled "OK".

Message

Add correct password

OK

7. Project Outcomes

We have successfully created a Java application of a working and functional Polling system project in which :

1. There's a Registration page for users, a Login Page for user and admin login, an Error page if the username/password is incorrect, a Voting page for the users, an Admin page in which the admin can either vote or check the results. At last, there's a Results page which will display the final result (max no. of votes).
2. All the votes are being stored in a table in database and are being calculated accurately to display the option with maximum number of votes.
3. Implementation of Java Database Connectivity has been done efficiently. All the data is stored in a SQL database which can be accessed any time.
4. This project was based on GUI i.e., Graphical User Interface and we have successfully implemented it.

8. Conclusion and Future Scope:

“College Polling System” application satisfies all the needs of the administrator and voter. This application successfully provides accurate votes given by users without any loss of time. It provides an easy way for users to choose an option.

Future Scope: Currently, our project is a Java application which will run on a single device only, but in future it can be improved by using java servlets and thus making it a web based application.

The coding style can be improved and the code can be made more efficient. Images and other graphics could be used in GUI for a better display of outputs.

Future development focused to design a system which can be easy to use and will provide security and privacy of votes on acceptable level by proper authentication and processing section.

To conclude, Polling Systems have many advantages over the traditional voting system. Some of these advantages are less cost, faster generation results, easy accessibility, accuracy, and low risk of human and mechanical errors. It is easy to use and it is less time consuming. It is very easy to debug.

*THANK
YOU*
